PROJECTS

Theatre-app:

Theatre App is a web application designed to help users find and purchase tickets for various theatre productions. I contributed to the development of the user interface using **Angular** and the backend using **php** to create authentication API and connect with database .

Social-media website:

It is a platform that allows users to connect and share content with friends and followers
Using **React** in frontend to build a clear and simple interface. for the backend I used **Node js** to create APIs and connecting with database (Mongodb)

E-commerce-app:

JEE : Using " ORM (JPA2, Hibernate)" I created an interface to let users create their products .
